

Need a new place to mount electronics, without having to cut fiberglass?

By Robert Forrester - 01.13.2008

I needed a place to mount my depth gauge and my GPS, but I didn't want to drill and cut holes into the fiberglass. I cut the new crewboard and mounted the depth gauge and GPS on the board. The nice feature is that it doesn't get sun damage, because it is put away when not in use.

The only problems I have encountered, is that I have had my crew through the jib sheet across my GPS or step on top of the board. I have a new GPS receiver and a new mount I am going to attach to the crew board.
